

• **AccountFlow**

Complete User Guide by Workspace Role

A practical guide to client management, tasks, visual references, brand verification, and AI-assisted design reviews.

Edition: July 2026

Roles: Admin - Manager - Member

What is AccountFlow?

AccountFlow is a shared workspace for account management and creative teams. It keeps client profiles, briefs, brand rules, tasks, files, visual references, and design reviews in one place.

Client Management

Create client profiles, assign account managers, track status, and store briefs, links, fonts, and brand assets.

Task Management

Create work items, set priorities and deadlines, assign teammates, and track completion.

Design References

Analyze designs a client likes and convert the visual direction into reviewable brand suggestions.

Design Review

Check final designs against dimensions, colors, logos, contact details, content, and approved references.

Core principle: AI suggests and explains. Permanent client-profile changes are applied only after human review and approval.

Recommended project flow

- 1 Create and complete the client profile.
- 2 Add approved logos and exact contact information.
- 3 Analyze strong visual references.
- 4 Create and assign tasks.
- 5 Run Design Review before delivery.
- 6 Approve, reject, or request changes with notes.

What can each user role do?

Capability	Admin	Manager	Member
View all clients and tasks	Yes	Yes	Assigned or shared only
Create, edit, and archive clients	Yes	Yes	No
Create and manage tasks	Yes	Yes	Within granted access
Apply AI suggestions to a client profile	Yes	Yes	No
Edit guidelines, logos, and contact rules	Yes	Yes	Read only
Run Design Review	Yes	Yes	Accessible clients only
Delete a user	Yes	No	No
Assign Admin or Manager role	Database only - roles cannot be selected in the UI		

ADMIN

System Administrator

Controls the entire workspace, all clients and tasks, team visibility, sensitive brand settings, and user deletion.

MANAGER

Account Manager

Runs day-to-day client operations, creates tasks, updates client profiles, reviews references, and applies approved AI suggestions.

MEMBER

Team Member

Works with assigned clients and tasks, reads client rules, and completes work within granted access.

SECURITY

Safe defaults

Every new account is created as Member. A browser request cannot promote a user to Manager or Admin.

Sign-in and session behavior

Sign-in screen: Use your email and password, choose Sign In, and switch between English and Arabic when needed.

- 1 Enter the registered email address.
- 2 Enter the password and select **Access Dashboard**.
- 3 The system stores a short-lived Access Token.
- 4 A 30-day Refresh Token renews the session automatically.
- 5 Use Sign out on shared devices.

After a session-system update: you may need to sign in once to receive a new Refresh Token. After that, refreshing the page should not make clients disappear.

Main navigation

Overview

Active clients, open tasks, priorities, and recent activity.

Clients

Search, create, edit, archive, restore, and open client profiles.

Tasks and Calendar

Manage assignments and review deadlines by date.

Team, Files, Activity, Settings

Workspace users, links, logs, and account settings.

Create and maintain a client profile

Create Client (Fast)

Client Name (English) *

Mohamed

Industry *

IT

City *

Alex

Status

Lead

Cancel Submit

The fast Create Client form.

- 1 Open Clients and select Add Client.
- 2 Enter the English name, industry, and city.
- 3 Select Lead, Onboarding, Active, or another status.
- 4 Select Submit and wait for confirmation.

Complete the profile

Add the Arabic name, country, account manager, Drive link, logo, fonts, brief, and last completed project. The completion score increases as profile fields are filled.

Archive is not permanent deletion: archived clients remain stored and can be restored by an Admin or Manager.

Task management and collaboration

Create a task

1. Add title and description.
2. Choose priority.
3. Link the client.
4. Assign a teammate and due date.

Control access

Accessible Teammates determines who can see the task. Members see tasks assigned or explicitly shared with them.

Files and links

Add Drive links, supporting information, and the final attachment when work is completed.

Calendar

Tasks with due dates appear in the calendar so workload and busy days are easy to identify.

Role-based task flow

- **Manager:** creates the task, selects the assignee, and grants access.
- **Member:** follows the brief, updates the work, and adds the final link or attachment.
- **Admin:** monitors delivery and resolves team or access issues.

Turn client taste into reusable rules

- 1 Open a client and select Design References.
- 2 Upload JPG, PNG, or WEBP. Files larger than 10MB are compressed automatically.
- 3 Add context: what did the client like, and what should be ignored?
- 4 Run analysis to extract colors, typography, layout, imagery, and graphic elements.
- 5 Edit, accept, or reject every suggestion.
- 6 Save a draft or choose Approve & Apply.

2. Brand Guidelines

☒

COLORRULES > ALLOWEDCOLORS

Current value: "['#4B0082', '#00BFFF', '#FFFFFF', '#D3D3D3'] and ['#1FC6C6', '#6B007C']"

Suggested value: "['#00BFFF', '#6B007C', '#FFFFFF']"

Reason: Vibrant colors used in the reference align with the visual style suggestion

3. Design Instructions

☒

Use rounded edges for buttons and cards

Reason: Harmonizes with modern aesthetics and current design trends

4. Things to Avoid

☒

Avoid dark backgrounds in text-heavy areas

Reason: Inconsistent with current brand guidelines that prioritize readability

Human Review Notes

Add context or instructions for the design team...

Save Review Draft

☒ Approve & Apply to Client Profile

Review suggestions before applying them to the client profile.

Colors, instructions, and exclusions

Brand Guidelines

Current and suggested values are shown separately. HEX values are displayed with real color swatches so users can understand the palette visually.

Design Instructions

Concrete execution rules such as corner radius, spacing, icon treatment, hierarchy, and layout behavior.

Things to Avoid

Visual choices that conflict with client taste, reduce readability, or weaken consistency.

Plain-language explanations: every reason explains what the AI noticed, why it suggests the change, and what effect approval will have.

Confidence: low-confidence items and conflicts require human review. Do not use Accept All without reading the reasons.

Review controls

- Edit the suggested value before approval.
- Use Accept All or Reject All only after reviewing the whole group.
- Add Human Review Notes for context that the creative team should retain.

Approved logos and contact details

Logo & contact verification

Read-only summary. Edit these permanent rules from the client's Design References tab.

Approved logos

Primary logo
english · top-left · required
X 16% · Y 13% · width 15% · margin 5% · allowed range $\pm 3\%$

Primary logo
primary · top-right · required
X 88% · Y 8% · width 15% · margin 5% · allowed range $\pm 3\%$

Required numbers & contact details

Main phone: 01553801475
phone · bottom-left · exact match

Upload a design

Choose File 1.png

other

Design title (optional)

Campaign name (optional)

Upload design

Approved logo variants, broad placement regions, and exact client contact values.

Logo rules

- Add multiple variants: Primary, Arabic, English, White, Black, Icon, or Other.
- Select a broad region such as top-right or bottom-left.
- Drag the logo in the preview. The dashed line is the safe margin; the blue area is the allowed range.
- X, Y, and Width are guidance only. Small differences do not mean the logo is missing.

Contact verification

Add phone, WhatsApp, hotline, website, or social handle values. Define the expected region and whether exact matching is required.

Analyzing...

Approve as reference

No review yet — click "Analyze design" to run the technical + AI checks.

Real backend progress stages are shown while the review is running.

- 1 Open Design Review for the client.
- 2 Select a file under Upload a design.
- 3 Choose the design type and optionally enter title and campaign.
- 4 Upload, select the new design, then choose Analyze design.
- 5 Follow progress through technical checks, references, logos, AI review, and scoring.

Large images: files over 10MB are converted to WebP and compressed below 9MB before upload.

Changes required

Overall 54 Technical 67 Brand 25 Content 67 Confidence 86

The design presents multiple violations against brand guidelines including color usage, logo placement, and typography inconsistencies.

Reference Feedback

محتاج تعديل كذا، القفط دي:

- التحكم في الألوان: اللون البنفسجي المستخدم في الخلفية غير متوافق مع الألوان المسموحة.
- الشعار: تمساح تقويم شعار "Marketing Dose" في الزاوية العليا اليسرى.
- التصوير: استخدام خط أنابيب سيريف جريء للترويست ويفضل أن يكون كما هو موصى به.
- التصميم: اعتماد على تصميم شبكي اسمي مع استخدام أكثر لألوان المسموحة.

Summary, category scores, Reference Feedback, and decision controls.

Score	Meaning
Overall	Combined compliance score across all categories.
Technical	Dimensions, orientation, measurable color rules, and technical image properties.
Brand	Logo, identity, typography, and client-rule compliance.
Content	Required text, CTA, contact values, and content requirements.
Confidence	How strongly the available evidence supports the result.

Reference Feedback: practical Arabic guidance explaining how to match approved visual references.

Suggested Prompt: an English prompt for a designer or image generator containing the required corrections.

Violations and logo verification

Violations (5)		
✖	Design dimensions The uploaded image is 4105 × 5130 px, but the guidelines require 1080 × 1350 px (tolerance 2px).	100% confidence
✖	Primary logo presence The required primary logo is not present in the design.	90% confidence
✖	Primary logo identity The required logo variant is not used in the design.	90% confidence
✖	Logo Position Logo is not located in the required top-left position.	90% confidence
✖	Contact value match The phone number is present but does not exactly match the expected value.	80% confidence

Each check includes a result, explanation, and confidence percentage.

- **Pass:** the rule is satisfied.
- **Warning:** a difference needs attention but is not a confirmed violation.
- **Fail:** clear evidence supports a violation.
- **Unknown / Manual Review:** the image or text is not clear enough for a safe decision.

Logo comparison: the system crops and enlarges the expected region, then compares it with each approved logo image. Size, background, or precise-coordinate differences alone are not violations.

False-positive protection: a Fail or Warning below 60% confidence becomes Manual Review and is not counted as a confirmed violation.

Feedback, prompts, and final actions

The full design-review report.

Available decisions

- **Approve:** accept the design.
- **Request Changes:** return it with Human Notes.
- **Reject:** require a substantial redesign.
- **Approve as reference:** save the design as a visual reference for future reviews.

Consistency safeguard: when dedicated logo verification passes, general feedback claiming that the logo is missing is removed automatically.

BEST PRACTICES

Recommended client workflow

- 1 Create the client and complete the profile.
- 2 Add exact logo assets and contact details.
- 3 Upload two to five strong references that genuinely represent client taste.
- 4 Review and apply only approved AI suggestions.
- 5 Create tasks and assign clear ownership.
- 6 Upload the final design for review.
- 7 Review violations by confidence and evidence.
- 8 Approve, request changes, or reject with notes.
- 9 Promote strong approved work to a future reference.

Do

- Use original, clear logo files.
- Write precise context notes.
- Verify contact values manually.
- Record decisions in Human Notes.

Do not

- Do not approve AI output blindly.
- Do not upload irrelevant references.
- Do not treat Unknown as Fail.
- Do not manage roles through the UI.

Common issues and solutions

Issue	Resolution
Clients disappear after refresh	The session renews automatically. If the session predates Refresh Tokens, sign in once again.
Image is larger than 10MB	Wait for automatic compression. Use JPG, PNG, or WEBP. If compression fails, reduce dimensions or export as WebP.
Analysis appears stuck	Watch the progress stage. If Analysis failed appears, retry and verify API, Cloudinary, and OpenAI connectivity.
Logo exists but result is Unknown	Confirm the approved logo asset and broad region. Unknown is not a violation and requires human review.
Reference Feedback is outdated	Run Analyze design again to generate a new review with the latest logic.
Guidelines cannot be edited	Members have read-only access. Admin or Manager is required to edit and apply rules.

Summary: the client profile is the source of truth. Better briefs, logos, contact values, and references produce more reliable design reviews.

Prepared from the implemented AccountFlow features and actual interface screenshots. Updated July 25, 2026.
